

### Vokèra Diverter Valves:

The Compact HE, the Unica HE and the Linea HE were fitted with a waterblock and diverter valve actuator. The components comprise waterblock manifold section, cartridge, actuator and cable.

First version:  
Manifold and cartridge 10026508  
Cartridge alone 10025305  
Actuator 10025304\*  
\*If replacing this actuator with  
20017594 you'll need cable 20022564  
Square pin R10025450  
Round circlip 10025449

The early Compact A, Linea One and some Unica HE boilers had a later version of similar but non-interchangeable components.

Second version:  
Manifold and cartridge 20021496  
Cartridge alone 20043954  
Actuator 20024841  
Square pin 10025450

All current Vokèra combination boilers have the latest combination of components.

Third version:  
Manifold and cartridge 10026508  
Cartridge alone 10025305  
Actuator 20017594  
Square pin 10025450  
Round circlip 10025449

If in doubt the whole section can be purchased and replaced complete at a cost less than the combined individual items:  
20034037

REMEMBER whenever replacing a 'D' shaped actuator with a new round model a new cable is required:  
20022564

All parts are interchangeable on the first and third versions except the connecting cable from the PCB to the actuator. These versions have two securing pins.

The second version has a round actuator but has only one securing pin. None of the components of the second version are interchangeable with the first or third version.
