

## Further details regarding the individual steps (cont.)

4. Adjust the upper output:  
Turn rotary selector "🌡️|||"  
to the control range on the right.  
The display shows 5 bars for upper output.

5. Measure the CO<sub>2</sub> content for upper output.  
The CO<sub>2</sub> content must be between 7.4 and 10.5 %.

6. Adjust the lower output:  
Turn rotary selector "🌡️|||"  
to the left control range.  
The display shows 1 bar for lower output.

7. Test the CO<sub>2</sub> content for lower output.  
The CO<sub>2</sub> content must be between 7.4 and 10.5 %.

8. If the CO<sub>2</sub> content is **not** within the given range, check the flue gas/ventilation air system for tightness.  
Remedy any leaks.

9. Shut the boiler down, remove flue gas analyser and close flue gas port (A).
